

CUSTOMER MILESTONE BRIEF

MS #32 - Governed Pilot Work Package

Purpose, customer value, delivered capability, evidence, and claim boundaries

Status	Complete
Release	0.32.0
Date	2026-08-30
Audience	Customers, partners, executives, architects, delivery teams, and assurance reviewers

Executive summary

MS #32 - Governed Pilot Work Package converts a specific part of the LIGHTYEAR modernization approach into a governed, reviewable capability. Compiles a human-selected pilot into exact, coordinated development cells with acceptance evidence and blocked live-evidence requirements.

Why this matters to a customer

Compiles a human-selected pilot into exact, coordinated development cells with acceptance evidence and blocked live-evidence requirements.

The practical result is a narrower, evidence-backed decision instead of a broad modernization claim. Commercial, architecture, delivery, security, and assurance teams can review the same capability, proof, and limits.

What the milestone delivers

- Added a content-addressed human pilot-selection contract bound to the exact MS #31 assessment and source-only dossier.
- Required business and technical ownership, rationale, outcomes, success criteria, bounded data policy, and one explicit disposition for every unresolved source boundary.
- Compiled the selected mixed ACCOUNTV slice into five deterministic development cells spanning COBOL, PL/I, JCL, Db2, and HLASM with exact source, graph, dependency, output, deliverable, acceptance-evidence, and live-evidence scopes.
- Added four governed planning waves from boundary verification through blocked authorized-native validation, with automatic dispatch disabled in every wave.

- Added standalone select and package commands plus POSIX and PowerShell parity, frozen selection and work-package schemas, committed reference artifacts, and fail-closed tamper tests.
- Kept every generated cell in draft-scope-not-admitted state; no signed work order, model qualification, authorized native execution, mainframe equivalence, or production readiness is claimed.

How it differs from earlier work

MS #32 builds on MS #31 (Customer Estate Assessment Planner). The earlier milestone established its own bounded capability; this milestone adds governed pilot work package while preserving the earlier evidence and its limits.

Earlier evidence is not automatically promoted into this milestone. A parser, simulator, local comparison, or generated artifact is not live platform equivalence or production readiness.

What a customer can do with it

A customer can use governed pilot work package as a bounded decision and delivery capability, attached to approved sources, owners, policies, target architecture, acceptance criteria, and authorized evidence.

Unresolved semantic loss, policy decisions, unsupported behavior, and live-evidence requirements remain visible.

Evidence and acceptance posture

The repository capability is complete because its committed implementation and release record are present. Customer qualification remains claim-specific and evidence-class-specific.

Review exact source and artifact identities, distinguish development from authorized live evidence, inspect policy and loss classifications, confirm passed and blocked gates, and verify that later changes have not invalidated the evidence.

Boundaries and claims not made

- Kept every generated cell in draft-scope-not-admitted state; no signed work order, model qualification, authorized native execution, mainframe equivalence, or production readiness is claimed.

Source of record

- CHANGELOG.md release section(s): 0.32.0
- README.md product and operating guidance
- LIGHTYEAR-ROADMAP.md governing sequence and claim classifications
- docs/milestones/catalog.json metadata and docs/milestones/manifest.json artifact integrity

The underlying schemas, receipts, ledgers, tests, and policy decisions remain authoritative when greater detail is required.
